## World's First Carbon Fiber Deuce Debuts at 2012 GNRS

The revolution in the Voodoo Evolution™ 32R lies below the surface where epoxy-carbon fibre dramatically reduces weight and a sophisticated tubular chassis provides a killer low stance. New from Voodoo Hot Rods™, high-tech composites, structural design and manufacturing processes result in a body that's half the weight at just 200 lbs!

Cutting the cost to build a Deuce with links to rival an AMER winner, the Voodoo Evolution™ 32R

features V-sectioned hood top, dropped grill, raised wheel wells, stretched cockpit, raked windshield, carbon/Kevlar twill highlights on inner panels, and unique cockpit and trunk tabs. High quality reduces typical paint prep from 200+ hours to approximately 60.

The Voodoo Evolution™ 32R chassis sits four inches lower than repro' frames, with over five inches suspension travel for great ride quality. The one-piece tubular rails mimic a Deuce that's

been pinched, bobbed, pie-cut, mini-tubbed and Z'd - but without the cost and engineering compromises. Importantly the Voodoo Evolution™ 32R offers substantial impact protection that's completely concealed on a finished roadster.

Just as revolutionary is the 32R's price. Costing less than a repro' steel body and chassis, Voodoo Hot Rods™ claim the 32R can be completed for under \$50,000. [www.voodoohotrods.com](http://www.voodoohotrods.com) contact Mr Goult Paradise on 0429-854157
